Convert the following RE to  $\varepsilon$ -NFA and find the  $\varepsilon$ -closure of all the **Q3**) a) states and corresponding DFA. (0+1)\*. 1.(0+1)[9] The set of strings over  $\{0,1\}$  that have at least one 1. **[6]** b) The set of strings over  $\{0,1\}$  that have at most one 1. The set of all strings over  $\{0,1\}$  ending with 00 and beginning with 1. OR Consider the two RE r=0\*+1\*, s=01\*+10\*+1\*0+(0\*1)\**Q4*) a) [8] Find the string corresponding to r but not to s. Find the string corresponding to s but not to reii) Find the string corresponding to both r & s Find the string corresponding to neither r nor s. Write regular expressions for the following languages over the alphabet  $\sum = \{a,b\}$ [7] i) All strings that do not end with 'aa'. The set of all strings ending neither in b nor in ba ii) Find the shortest string that is not in the language represented by iii) the regular expression a\*(ab)\*b\*.
